SURFACE

SI

High compressive strength and quick-set self-leveling underlayment

## **TECHNICAL DATA SHEET**

consumed, and ultimately applied.

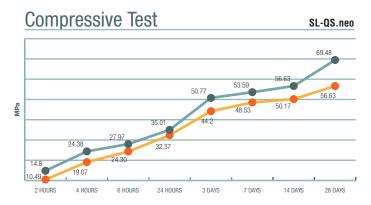

**UNIVERSAL PREMIUM** 

Description:	Hydraulic fluid mortar with rapid setting and accelerated drying for poorly finished, uneven surfaces or those with imperfections that require optimal leveling. SL-QS.neo offers a high-performance additive formulation that, when mixed with water, results in a self-leveling product free of shrinkage for thicknesses ranging from 1/16" to 2 3/4" (1.5 to 70 mm)					
Key features:	Easy to apply with excellent fluidity	Easy to apply with excellent fluidity				
	Supports light traffic 2 to 3 hours after application					
	Fast setting and very high strength					
Uses:	<ul> <li>Recommended for industrial, commercial, and residential areas. For correcting uneven or damaged existing surfaces on concrete floors, slabs, natural stone, terrazzo, ceramic tile, etc.</li> </ul>					
	• For filling voids or differential thicknesses between 1/16" and 2 3/4" (1.5 to 70 mm)					
	<ul> <li>Suitable for installing vinyl flooring, wood, laminates, carpets, ce</li> </ul>	eramics, epoxy systems, ureth	nanes, etc.			
	<ul> <li>Suitable for vehicular traffic and forklifts with common weight and rubber wheels, minimum thickness 1/2"</li> </ul>					
	<ul> <li>SL-QS.neo must always be protected by a final finish (flooring, epoxy/urethane seal, anti-stain, shine, etc.), even when proceeding with mechanical polishing</li> </ul>					
Packaging:	55 lbs (25 kg) bags of light grey powder					
Technical references:	(Laboratory test at 73°F)					
references.	Physical Appearance	Light grey powder				
	Water quantity per bag (thickness 1/16" to 3/8") (1.5 to 10 mm)	1.36 gallons				
	Water quantity per bag (thickness 3/8" to 2 3/4") (10 to 70 mm)	1.19 gallons				
	Working time <sup>7</sup>	≈ 20 minutes				
	Ready for light traffic at 1/8" (3 mm) <sup>2</sup>	2 to 3 hours				
	Drying time for finish installation <sup>2</sup>	6 to 48 hours				
	Compressive Strength at 28 days (ASTM C109) <sup>3</sup>	10,099 psi				
	Flexural Strength at 28 days (ASTM C348) <sup>3</sup>	1,067 psi				
	Adhesion Test at 28 days (ASTM C1583) <sup>3</sup>	2.21 Mpa	Minimum thickness per			
	Reference time in Ford No. 5 cup (viscosity) <sup>3</sup>	1 min 40 sec	application: Underlayment: 1/16"			
	Taber Abrasion Test (ASTM D4060-19) (CS-17 disk - 1kg - 1000 rpm) <sup>3</sup>	0.0169 ounces (weight loss)	Resins: 1/4"			
	Shrinkage Test at 28 days (ASTM C157) <sup>3</sup>	0.040%	DPA System: 1/4"			
	<ul> <li><sup>1</sup> According to laboratory tests and variable depending on site conditions</li> <li><sup>2</sup> Depending on the thickness of the leveling and the type of floctring to be installed, the substrate's moisture level should be verified using measurement equipment, as drying times may vary</li> <li>To determine the material consumption, it is calculated based on THEORETICAL data from laboratory tests. Actual conson-site may vary due to factors such as: rough, irregular, cracked surfaces, with cavities, porosity, warping, as well a thicknesses different from those specified, etc. Under no circumstances are we responsible for the quantity of materials rough.</li> </ul>

## Measurement equipment from our laboratory

Revision: 08/May/25 12:05 PM

Substrate preparation	The slab, mezzanine, or surface to be leveled must be at least 28 days old or have reached its full strength and must be free of moisture (it is recommended to take measurements with calibrated equipment and by qualified technical personnel). <b>SL-QS.neo</b> is applied on clean, dry surfaces, without cracks, fissures, or cavities, which must be repaired if necessary. If control joints or construction joints exist, they must be treated appropriately to allow them to be coated with <b>SL-QS.neo</b> Improper substrate preparation invalidates the warranty Apply our primer <b>P-346</b> to the existing substrate; this application must follow the instructions in the corresponding technical data sheet. It is always recommended to apply two coats of sealer on porous surfaces. In high-traffic commercial and industrial areas,
	it is recommended to apply an epoxy primer with silica sand broadcast.
Mixing and	The levels should be measured with a laser or special equipment
application:	The right product mixing is needed to achieve the expected results; it's recommended to use a special mixer or pump equipment
	Mix the contents of the bags evenly with clean, fresh water (preferably at a temperature between 50 and 68°F). Never add more water than indicated, never mix our product with other
	Once the adequate fluidity has been obtained, the self-leveling mixture should be emptied immediately in uniform sections based on the expected yield and according to the calculated thickness
	Extend the mixture with a squeegee or special trowel to control the correct thickness. Use a "leveling float" repeatedly in one and other way to avoid the air stored in the mixture
	Very important: Absolutely avoid mortar being exposed to air currents and direct rays of the sun during the first 24 hours after application.
Shelf life and storage:	It has a shelf life of up to 12 months as long as it is sealed in its original bagging in a dry, cool place, protected from sunlight and moisture.
Special care:	This product contains additives that do not pollute the environment, is not toxic or have organic components that degrade. The use of protective equipment such as safety glasses, dust mask and latex gloves is recommended. Keep out of the reach of children.
Limited warranty:	<b>TECNODRY</b> extends the warranty of quality of our products, based on the use of raw materials of the highest quality, ensuring its quality and behavior according to our specifications. <b>TECNODRY</b> is not responsible for failures that arise from errors in preparation, installation, finishing or failure of the surface in which it's applied. The information contained in this document has been provided in good faith based on the current knowledge and experience of <b>TECNODRY</b> . The information is valid exclusively for applications and uses to which reference is made. The information expressed herein does not exonerate the user from testing products and performances for the desired application and purpose
